[Click to Email Us About No-Cost Office Wireless & Wireline Infrastructure Upgrades](#)

As the CDC continues to ease their COVID-19 recommendations, many Americans are getting comfortable taking larger steps back toward "normal." This relaxation is certain to spark a return to office work and travel for many people, *especially toward summer's end*. The question is: **Are your properties ready NOW?**

With 80% of mobile usage originating from inside buildings, savvy property owners and their teams now realize the **ever-increasing importance of reliable indoor cellular and wireless connectivity**. Wireless signals are being degraded today by stress on limited-capacity national networks, while dense construction materials like low-e glass, and interference of cellular signals by surrounding buildings, also contribute to wireless reception problems.

Now, savvy property owners looking toward the future are taking advantage of tremendous opportunities to **enhance wireless performance and reliability**, strengthen security and increase cost efficiency by upgrading their networks in order to tackle challenges that only a superior quality, dedicated and secure network can reliably support.

## How Airwave can help

**With no up-front costs for property owners**, Airwave completely upgrades whole-building wireless and wireline infrastructure, creating building-wide, seamless wireless and wired broadband networks that:

- Eliminate in-building dead zones
- Allow tenants and visitors to connect using any of their devices
- Allow property owners to automate and control their buildings with Internet of Things ("IOT") devices such as wireless door locks, security cameras, and building automation and control technologies
- Allow wireless carriers to access the Airwave network so their customers may experience full signal levels throughout the property on their mobile phones

Airwave enhances this capability by implementing a data center for each network we deploy.

## Advantages of an Airwave Network for a Property Owner

As national network wireless signals continue to deteriorate, informed employees at property companies--and these companies' shareholders--know the **time is now** to ensure reliable indoor cellular coverage,

future-proof their wireless networks and increase property values throughout their portfolios. An Airwave network provides building owners with benefits like:

<b>Improved indoor AND outdoor performance</b>	<b>Wider Reach</b>
<b>Fewer dropped calls</b>	<b>More cost efficient: fewer access points, upgrades</b>
<b>Increased control of internet and cellular services</b>	<b>Much more secure than Wi-Fi alone</b>

### **Rooftop Cell Sites Generating Additional Revenue for Property Owners**

We are seeing immediate-term carrier interest in many property rooftops and encourage owners not to miss any revenue opportunities since equipment sizes in most cases have become relatively compact. Airwave represents property owners only, not carriers, and our goal is to give your properties the competitive advantage to be leased by the wireless carriers at the highest possible value.
